

MODERNIZED T-18A BALLISTIC PROTECTION EQUIPMENT KIT

Modernized T-18A ballistic protection equipment kit (KZBO) comprises 12 modified existing parts of KZBO T18, as well as 8 completely new items intended for members of the Serbian Armed Forces special units with the aim of ballistic protection and carrying and combat use of weapon components, military equipment and combat resources.

Chest-mounted carrier is intended for storing certain equipment parts during long-duration marches, reconnaissance missions in extreme conditions when carrying the ballistic equipment is not required.

Carrier for wounded – injured (Casualty carrier) is intended for battlefield casualty evacuation by carrying the injured on the back. This allows the person providing assistance to move more easily without using hands, so they can deliver fire support and protect themselves and others during evacuation.

Case – holder for ballistic computer – navigation device is intended for storing of the portable computer or navigation device during execution of marches, parachute jumps and other operations.

Ballistic protection belt with harness – intended for placing other parts of the equipment kit to the lower part of the back and on the sides, as well as for protection of abdominal section. It provides protection of IIIA level according to the NIJ STD 0108.01 standard and protection against fragmentation effect according to MIL STD 662F.
